

# All Agency Project Request

2009 - 2011 Biennium

---

<b><u>Agency</u></b>	<b><u>Institution</u></b>	<b><u>Building No.</u></b>	<b><u>Building Name</u></b>
University of Wisconsin	Milwaukee	285-0B-1915	HEATING PLANT - CENTRAL
<b><u>Project No.</u></b>	10J1Q	<b><u>Project Title</u></b>	Htg Plnt CW Sys Strainer Repl

## **Project Intent**

This project replaces the condenser water strainers on two chillers to improve operations and energy efficiency and to reduce operational maintenance costs.

## **Project Description**

Project work includes replacing two manually operated basket strainers with automatically operated quad basket strainers that protect the condenser tube bundles for Chillers No. 1 and No. 2. These devices enable mussels and plant material to be removed from the Lake Michigan water (used for condensing) and allow for automatic basket cleaning during chiller operation. This project also automates the strainer cleaning cycles, installs new strainer controls, re-pipes oil cooler and air ejector cooling water to supply them with filtered water, and installs an 8-inch hot well drain.

## **Project Justification**

The central Heating and Cooling plant provides cooling to campus buildings using two 2,750-ton steam driven York chillers and one 3,000-ton electric drive Carrier chiller. These chillers use a lake water condenser water system to condense refrigerant gas rejecting heat collected from campus buildings to Lake Michigan. The use of lake water for refrigerant condensing instead of cooling towers saves hundreds of thousands of dollars each cooling season and is essential to the operation of the plant's chillers. Due to the invasion of a new mussel (Quagga Mussels) in Lake Michigan, and a subsequent increase in lake plant growth, increased solids in lake water pumped to the plant can block the chiller refrigerant condensers. Any reduction of cooling water due to plugged chiller condensers increases power consumption, increases the cost per ton of cooling produced, decreases chiller capacity, and causes unscheduled shut down of chiller equipment. This project will upgrade the strainers to remove smaller particles from the lake water to prevent blocking of the chiller condensers and will convert the manual strainer back flush cycles to automatic operation. A similar project was implemented in 2008 to automate the strainer for the adjacent Carrier chiller, this project will upgrade the strainers on the two remaining York chillers.

## **A/E Consultant Requirements**

Consultants should have specific expertise and experience in the design and coordination of water filtration systems as part of a design team. Work includes site surveys, acquiring field data, and verifying as-built conditions to assure accurate development of design and bidding documents, and production of necessary design and bidding documents. Consultants should indicate specific projects from past experience (including size, cost, and completion date) in their letter of interest and when known, include proposed consulting partners and specialty consultants.

A/E Selection Required?

## **Commissioning**

- Level 1
- Level 2

# All Agency Project Request

2009 - 2011 Biennium

## Project Budget

Construction Cost:	\$158,500	
Haz Mats:	\$600	
<hr style="width: 50%; margin-left: 0;"/>		
Construction Total:	\$159,100	
Contingency: 15%	\$23,900	
A/E Design Fees: 8%	\$12,700	
DFD Mgmt Fees: 4%	\$7,300	
Equipment/Other:	\$0	
<hr style="width: 50%; margin-left: 0;"/>		
	<b>\$203,000</b>	

## Funding Source

GFSB - Infrastructure [Z450]	\$170,500
PRSB - []	\$0
Agency/Institution Cash [AGF0]	\$32,500
Gifts	\$0
Grants	\$0
Building Trust Funds [BTF]	\$0
Other Funding Source	\$0
<hr style="width: 50%; margin-left: auto; margin-right: 0;"/>	
	<b>\$203,000</b>

## Project Schedule

SBC Approval: 12/2010  
 A/E Selection: 01/2011  
 Bid Opening: 08/2011  
 Construction Start: 11/2011  
 Substantial Completion: 04/2012  
 Project Close Out: 07/2012

## Project Contact

Contact Name: Mark Kazmierski

9. Are there any other issues affecting the cost or status of this project?

10. Will the construction work be limited to a particular season or window of opportunity? If yes, explain the limitations and provide proposed solution.

Project work is seasonal. Preferred project work schedule should be limited to late fall, winter, and/or early spring months if possible.
